Contract 445

23 November 2012

To whom it my concern

C/- Pipe Technologies Limited  
PO Box 8109  
**NEW PLYMOUTH**

## Reference for Pipe Technologies

The Central Hawkes Bay District Council has engaged the services of Pipe Technologies for the past three years to carry out Relining of the Council's Wastewater Gravity Mains in the townships of Waipukurau and Waipawa.

Council have found Pipe Technologies helpful right from the initial approach regarding relining technology, providing comprehensive product information and then following this up with excellent planning, administration and construction details. We have found their crews working on site to be knowledgeable in the products being used and have being impressed with their regard to Health and Safety not only for themselves, but also site visitors and members of the public. The liaison and dialogue Pipe Technologies has provided with the residents and tenants of the properties during the relining phase has seen the Contract progress smoothly.

To date Pipe Technologies have relined 2400 lineal metres with their AM Lining Product and 90 lineal metres with CIPP. This current financial year a further 700 lineal metres of AM Lining and 200 lineal metres of CIPP is to be carried out. This relining work includes pre-cleaning of existing lines, trimming of protruding laterals, opening of lateral connections after lining and post CCTV.

In addition Council have engaged Pipe Technologies to use their Top Seal Lateral Joint Repair system to carry out urgent repairs to existing lateral joints to the main pipes that have been causing infiltration issues for Council. I have observed the installation of the Top Seal system and have been impressed with methodology used to seal these joints. Video footage Post Line has confirmed the effectiveness of the Top Seal system in eliminating infiltration at these joints.

If you have any further queries please do not hesitate to contact me on 06 857 8060.

Yours faithfully
